Paper Title

ML-Optimized Stochastic Vehicle Routing for Urban Delivery Services

Reviewer #1

Questions**1. Type of Paper**

Experimental Analysis

2. Technical Content

Good

3. Novelty and Originality

Moderate

4. Figures and Visual Quality:

Good - Minor scaling issues

5. Detailed comments to the authors

1.Missing details:

Dataset size and preprocessing steps

Parameter settings for solvers (ALNS, ACO, ABC)

Number of Monte Carlo simulations

2.The “ML-optimized” claim is not fully justified.

Forecasting components lack depth:

No hyperparameter details

No training/validation methodology

No performance metrics (MAE, RMSE) for predictions

3.The work is primarily:

A replication + benchmarking study

Incremental extension of SVRPBench

No fundamentally new algorithm or theoretical contribution.

6. Your decision regarding the inclusion of the paper in the conference
